- Broca and Wernicke
- Sleep Facts-- Look at the Lecture!
- Frontal control
- Executive control
- Autism
Taking Multiple Choice tests

RELAX! Don't panic...Relax..

ANSWER ONLY THE ONES YOU ARE 100% SURE ABOUT..
And the ones where you think you know the answers immediately to..

If you think about the question... and it could be A or D.. wait on that one
come back to it.. and mark the ones you think it could be.

Once you return back to the top.. ANSWER ONLY THE ONES YOU
CAN ANSWER IMMEDIATELY AND YOU ARE 99% sure about.

NOW once you come back to the ones you can't immediately answer:
ELIMINATE as many options as you can...then pick the one that is left,
If two left and you have absolutely no idea: Flip a coin.

Secret of MCTs: Professors can be lazy. They will often use the
same position in the MCT for the answer. So on the first PASS
through look where most of the answers are located.. if its “C”
then when you are eliminating options.. and there is B and C left?
Pick C.other things being equal

Of course it will help if you STUDY!!!
